PROFESSIONAL SUMMARY

Software engineer who turns operational pain points into shipped products, owning the work from problem discovery through adoption. Built a production tool for battery plant operators, demoed every release face to face, and grew usage to 2.5K+ records while translating technical decisions across engineering and business teams.

EXPERIENCE

Customer Service Engineer (Software) - LSP USA, LLC

Apr. 2026 – Present

- Identified and automated a manual NCR reporting workflow by independently shipping a production web tool with validation and role-based access, reducing documentation time from **10 minutes to 3 minutes** across **100 daily reports**.
- Led **cross-functional communication** across operators, engineers, managers, and plant leadership, and represented the team in an LG Energy Solution client interview by translating technical issues into clear business terms.
- Led root cause analysis of HMI, PLC, and Modbus-based product integration failures in live production environments.

Undergraduate Research Assistant - SDLE Research Center

Oct. 2024 – Oct. 2025

- Analyzed EDIFES's distributed architecture, data flow, and HBase implementation to identify integration points before contributing to the production codebase.
- Tuned HBase (NoSQL) queries on a distributed Hadoop cluster, cutting retrieval time **30%** and contributing to the team's **85x** pipeline speedup.

Data Science & GIS Intern - Development Monitors, LLC

Jun. 2025 – Aug. 2025

- Rapidly learned QGIS and led a comparative evaluation of QField and mWater, building equivalent prototypes and presenting a recommendation adopted by engineering and field teams.
- Built a Python and Plotly QGIS dashboard over relational survey data, supporting 20+ field deployments across Washington, DC.

EDUCATION

Case Western Reserve University

Cleveland, OH

B.S. in Data Science, Minor in Mathematics / Dean's Honor List (Fall 2023, 2024, 2025)

Aug. 2022 – Jan. 2026

- Relevant Coursework: Software Engineering, Algorithms, Database Systems, Artificial Intelligence, Data Structures

PROJECTS

Event Compass | [Senior Capstone Project](#) | *React.js, Typescript, OpenAI, Vercel, Supabase, Python*

Aug. 2025 – Dec. 2025

- Co-led a 5-person team building an **AI event-planning product**, integrating an **agentic** OpenAI copilot with application data and real-time dashboards over **55K+** cleaned survey points.

Demo_NCR | [Full-Stack Side Project](#) | *JavaScript, Node.js, PostgreSQL, AWS RDS, Anthropic API*

Apr. 2026 – Present

- Built and published a mobile-first demo of the production tool with JWT authentication, input validation, and PostgreSQL-backed workflows, using the project to **test changes safely** before presenting them to users.

Pantry AI | *Full-Stack Team Project* | *Next.js, React.js, Supabase, OpenAI, Vercel CI/CD*

Jan. 2025 – May. 2025

- Co-designed the system architecture and API contracts for a real-time Next.js and Supabase application, then **led 2** of 5 product modules spanning **18 API** routes and 10 user-facing views.. **Top 3 of 20** in CWRU Software Engineering.

SKILLS

- Languages:** Python, TypeScript, JavaScript, SQL
- Frontend & Backend:** React, Next.js, Node.js, PostgreSQL, REST APIs, AWS RDS
- AI:** OpenAI API, Anthropic API
